

ABSTRACT OF THE DISCLOSURE

5 A tool having a handle, shaft, and an engaging portion with
a first end and a second end, the first end connected to the
shaft. The engaging portion has a slot extending from the first
end to the second end thereby defining an axial inner surface,
the axial inner surface having a plurality of engaging surfaces.
Alternatively, the tool is a wrench generally cylindrical in
shape of one-piece construction, having a first end, a second
10 end, an engaging portion disposed both the first second ends,
and a slot extending between the first and second ends. The
first end has a plurality of axial engaging surfaces and a
plurality of notches penetrating the wall of the tool. The
second end has a plurality of tapered engaging surfaces thereby
15 decreasing the size of the opening away from end.
